

**Irish Fiscal
Advisory Council**

Fiscal Assessment Report
DECEMBER 2024

Supporting items

This provides additional information related to the Council's analysis in its main report

Item 1 – Detail on our assessment of fiscal rules

Item 2 – Our “Stand-Still” estimates

Item 3 – How the official tax forecasts are made

Item 1 — Detail on our assessment of fiscal rules

The net spending rule

€ billion unless stated otherwise

	2021	2022	2023	2024	2025	2026	2027
How the net spending rule is assessed							
Total spending ⁽¹⁾	75.9	88.8	94.7	102.4	105.4	112.4	118.0
plus assumed overrun ⁽²⁾					1.0		
less one-offs for cost-of-living supports ⁽³⁾		3.1	2.1	2.5			
Total spending less one-offs		85.8	92.6	99.9	106.4	112.4	118.0
less net impact of revenue measures		0.0	-0.4	-0.3	0.7	-0.2	-0.4
less new revenue-raising measures		0.2	0.4	0.9	0.4	0.2	0.2
less estimated impact of fiscal drag ⁽⁴⁾		0.5	1.0	1.0	1.0	1.1	1.0
plus new revenue-reducing measures		0.9	1.4	1.8	1.8	1.3	1.2
net carryover impact of old measures ⁽⁵⁾		0.2	0.4	0.2	-0.3	0.2	0.3
Total net spending		85.7	92.1	99.7	107.1	112.2	117.7
Single-year assessment ⁽⁶⁾							
Total net spending change in %		13.0%	7.4%	7.7%	7.2%	5.4%	4.7%
5% path	5%	5%	5%	5%	5%	5%	5%
Cumulative assessment since 2021							
Total net spending	75.9	85.7	92.1	99.2	106.4	112.2	117.4
5% path	75.9	79.7	83.7	87.9	92.3	96.9	101.7
Cumulative gap	0.0	6.0	8.4	11.3	14.1	15.3	15.7
Cumulative gap in %	0.0%	7.6%	10.1%	12.9%	15.3%	15.8%	15.5%

Sources: The Government's Budget 2025, and Fiscal Council workings.

⁽¹⁾ Total spending refers to total gross voted spending — a measure of central government spending that excludes interest and other non-voted spending. Note that for 2021, we use the original budgeted amount rather than the outturn, which was artificially lower as a result of the pandemic making some spending programmes impossible to proceed.

⁽²⁾ The overrun in 2025 assumes spending in 2025 is €1 billion higher due to current spending overruns in 2024 carrying forward and being repeated, rather than falling out as Budget 2025 assumes.

⁽³⁾ One-offs here are based on the Council's assessment of cost-of-living items that are temporary. Costs related to Ukrainian supports and supports for international protection applicants are included in total spending as they persist in the Government's projections.

⁽⁴⁾ Fiscal drag is a phrase used to describe increases in tax revenues that arise when taxpayers move into higher tax brackets as their earnings rise. This can happen even without any changes to tax rates. It is sometimes referred to as the impact of non-indexation.

⁽⁵⁾ Carryovers represent the net impact of revenue-raising and revenue-reducing measures introduced in previous years.

⁽⁶⁾ This is if the National Net Spending Rule was followed in 2025, ignoring and not making up for past breaches.

Summary fiscal rules assessment

% of GDP

	2024	2025	2026	2027	2028	2029	2030
Corrective Arm							
General government balance	4.5	1.7	1.4	1.1	1.6	1.5	1.4
General government balance Limit	-3.0	-3.0	-3.0	-3.0	-3.0	-3.0	-3.0
	✓	✓	✓	✓	✓	✓	✓
General government debt	41.4	37.9	36.0	34.8	34.0	33.1	31.7
Debt-to-GDP ratio Limit	60.0	60.0	60.0	60.0	60.0	60.0	60.0
	✓	✓	✓	✓	✓	✓	✓
Preventive Arm & Domestic Budgetary Rule							
MTO for the structural balance	-0.5	-0.5	-0.5	-0.5	-0.5	-0.5	-0.5
Structural balance	1.3	0.8	0.7	0.6	1.1	1.2	1.3
	✓	✓	✓	✓	✓	✓	✓

Sources: CSO; Department of Finance; and Fiscal Council workings.

Notes: All figures are presented on a general government basis. Assessments are based on the latest Department of Finance projections of revenue, expenditure, potential output, and the output gap. We use the Council's [principles-based approach](#) for assessing the Domestic Budgetary Rule and we reflect the Council's own views on what constitute one-off or temporary items. The medium-term objective (MTO) is assumed constant at -0.5% of GDP for each year.

The new EU fiscal rules may not work well for Ireland. For one, they rely heavily on GDP. This fails to recognise that GDP is not a good measure of national income for the Irish economy.¹ Ireland's debt ratio, when measured on a GDP basis is low and projected to stay below 60% of GDP. A second issue is that the rules do not treat some of Ireland's corporation tax receipts as exceptional despite their high concentration and the risk that they could fall suddenly and sharply. If these high-risk receipts disappeared, Ireland would be running a deficit.

Here, we assess the rules on a GNI* basis and exclude excess corporation tax receipts.

Summary fiscal rules assessment (alternative assessment)

% of GNI*

	2024	2025	2026	2027	2028	2029	2030
Corrective Arm							
General government balance*	-2.0	-1.7	-2.0	-1.9	-1.8	-1.9	-2.1
General government balance Limit	-3.0	-3.0	-3.0	-3.0	-3.0	-3.0	-3.0
General government debt	69.1	63.8	61.0	59.5	58.6	57.8	55.9
Debt-to-GDP ratio Limit	60.0	60.0	60.0	60.0	60.0	60.0	60.0
Preventive Arm & Domestic Budgetary Rule							
MTO for the structural balance	-0.5	-0.5	-0.5	-0.5	-0.5	-0.5	-0.5
Structural balance	-2.2	-2.7	-2.8	-2.5	-2.3	-2.2	-2.2

Sources: Department of Finance; and Fiscal Council workings.

Notes: All figures are presented on a general government basis. Assessments are based on the latest Department of Finance projections of revenue, expenditure, windfall corporation tax receipts and the output gap, as well as the Council's projections for potential GNI*. We use the Council's [principles-based approach](#) for assessing the Domestic Budgetary Rule and we reflect the Council's own views on what constitute one-off or temporary items. The medium-term objective (MTO) is assumed constant at -0.5% of GNI* for each year.

¹ It includes the profits of foreign multinationals which are not available for use by Irish residents. Huge worldwide exports by foreign multinationals are accounted for in Irish exports underpinning GDP. The gap between GNI* and GDP has grown to over €200 billion. This means that Ireland's debt ratio relative to national income is understated when scaled against GDP. For more on the EU rules, see the [Council's 2024 Briefing Note](#).

Net expenditure path (Fiscal Council assessment)

€ billion

	2023	2024	2025	2026	2027	2028	2029	2030
Total Expenditure ⁽¹⁾	115.9	125.3	131.3	139.0	145.7	153.3	160.8	167.8
Plus assumed overruns ⁽²⁾			1.0					
Less Interest	3.4	3.1	3.5	3.3	3.8	4.2	4.8	5.4
Less EU co-financed current spending	0.5	0.6	0.6	0.7	0.7	0.4	0.3	0.3
Less Cyclical unemployment expenditure	-0.4	-0.1	0.0	-0.1	-0.1	-0.1	-0.1	0.1
Less Expenditure funded by transfers from the EU	2.1	1.9	2.0	1.8	1.7	1.5	1.4	1.4
Less One-off expenditure items ⁽³⁾	2.1	2.5						
Adjusted expenditure	108.2	117.4	126.2	133.2	139.7	147.3	154.2	160.6

Nationally financed net primary expenditure	107.7	117.2	127.0	133.0	139.3	146.6	153.7	160.6
Single-year assessment								
Nationally financed net primary expenditure growth ⁽⁵⁾		8.3%	8.1%	5.4%	4.6%	5.0%	4.4%	4.1%

Sources: CSO; Department of Finance; and Fiscal Council workings.

¹ Total expenditure refers to general government expenditure. The 2023 figure reflects the outturn reported by the CSO. This was published on 21 October 2024, after Ireland's medium-term fiscal and structural plan was submitted to the European Commission. The figures for 2024-2030 reflect forecasts by the Department of Finance.

² The overrun in 2025 assumes spending in 2025 is €1 billion higher due to current spending overruns in 2024 carrying forward and being repeated, rather than falling out as Budget 2025 assumes.

³ One-offs here are based on the Council's assessment of cost-of-living items that are temporary. Costs related to Ukrainian supports and supports for international protection applicants are included in total spending as they persist in the Government's projections.

⁴ Revenue-raising measures (such as tax increases) can be used to offset bigger spending increases, whereas revenue-reducing measures (such as tax cuts) would lower the scope for spending increases. Estimates of revenue-reducing and revenue-raising measures are those judged by the Fiscal Council.

⁵ The growth rates for "nationally financed net primary expenditure" are equal to $\frac{\text{Nationally financed net primary expenditure}_t - 1}{\text{Adjusted expenditure}_{t-1}}$

Net expenditure path (Department of Finance assessment)

€ billion

	2023	2024	2025	2026	2027	2028	2029	2030
Total Expenditure	115.4	125.3	131.3	139.0	145.7	153.3	160.8	167.8
Less Interest	3.4	3.1	3.5	3.3	3.8	4.2	4.8	5.4

Single-year assessment								
Nationally financed net primary expenditure growth ⁽²⁾		9.8%	5.1%	6.5%	4.9%	5.4%	4.7%	4.2%

Source: The Government's national medium-term fiscal and structural plan

¹ The Department of Finance report only those discretionary revenue measures above 0.1 per cent of GDP in 2023, 2024 and 2025.

² The growth rates for "nationally financed net primary expenditure" are equal to $\frac{\text{Nationally financed net primary expenditure}_t - 1}{\text{Adjusted expenditure}_{t-1}}$

Item 2 — Our “Stand-Still” estimates

Stand-Still costs are estimates of how much public spending will have to rise by in future to maintain existing supports and services, while allowing for demographic changes and price pressures. They assume social welfare and public sector pay rise in line with general wages. Ultimately, this is a policy choice, and the approach assumes no efficiency gains in how public services are provided.

The Council’s “Stand-Still” estimates

€ billion, gross voted expenditure basis

	2026	2027	2028	2029	2030
Government's current spending increases	5.7	4.8	5.1	5.3	5.6
Our estimates of “stand-still” costs	4.8	4.5	4.8	4.9	5.0
of which Demographics	1.7	1.5	1.7	1.6	1.7
of which Prices and wages	3.1	3.0	3.2	3.2	3.4
Broken down by key area					
Education including the National Training Fund	0.4	0.3	0.4	0.4	0.4
Health and long-term care	1.6	1.6	1.7	1.7	1.7
State pensions	1.2	1.3	1.3	1.4	1.4
Public Sector pensions	0.3	0.3	0.3	0.2	0.3
Other social welfare payments	0.6	0.5	0.5	0.5	0.5
Rest of gross voted spending	0.6	0.6	0.6	0.6	0.7
Due to demographics					
Education including the National Training Fund	0.0	-0.1	0.0	0.0	0.0
Health and long-term care	0.9	0.9	0.9	1.0	1.0
State pensions	0.5	0.5	0.5	0.6	0.6
Public Sector pensions	0.1	0.1	0.1	0.1	0.1
Other social welfare payments	0.3	0.1	0.1	0.1	0.1
Due to prices or wages					
Education wages	0.4	0.4	0.4	0.4	0.4
Education prices	0.1	0.1	0.1	0.1	0.1
Health wages	0.4	0.3	0.4	0.4	0.4
Health prices	0.4	0.3	0.4	0.3	0.4
State pension	0.7	0.8	0.8	0.8	0.9
Public Sector pension	0.2	0.2	0.2	0.2	0.2
Social Welfare (excl. pensions)	0.3	0.4	0.4	0.4	0.4
Rest of gross voted spending wages	0.3	0.3	0.3	0.3	0.3
Rest of gross voted spending prices	0.3	0.3	0.3	0.3	0.3

Sources: Budget 2025, and Fiscal Council workings.

Notes: For 2025, the public sector pay deal is incorporated. For 2026, economy-wide wage growth is used as the pay deal only applies for half the year. These estimates are only based on gross voted spending and as a result are lower than estimates included in the Fiscal Council’s “Finance Minister The Game” which was based on general government spending.

The Council's general government "Stand-Still" estimates

€ billion, general government basis

	2026	2027	2028	2029	2030
Our estimates of general government "stand-still" costs	6.0	5.6	5.9	6.0	6.2
Broken down by key area					
Public sector pay and pensions	1.6	1.5	1.6	1.6	1.7
State pension	0.7	0.8	0.8	0.8	0.9
Other social welfare	0.7	0.8	0.8	0.8	0.9
Demographics	1.7	1.5	1.7	1.6	1.7
Other price pressures	1.1	1.1	1.1	1.1	1.2

Sources: Budget 2025, and Fiscal Council workings.

Notes: For 2025, the public sector pay deal is incorporated. For 2026, economy-wide wage growth is used as the pay deal only applies for half the year.

Item 3 —How the official tax forecasts are made

This section shows how the Government's official tax forecasts are made.

We break down the yearly tax projections so as to better understand how the forecasts are arrived at.

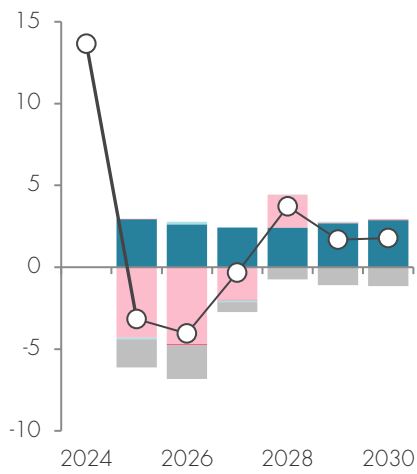

The annual changes in taxes broken down into:

- 1) "macro" drivers — the part of the forecast driven by growth in the relevant macro driver. A macro driver can be something like wage growth in the case of income tax, given that income tax is sensitive to how this evolves.
- 2) "one-offs" — non-recurring items that affect receipts.
- 3) "policy" changes, such as government decisions to cut or increase taxes. For income tax items, like PAYE and USC, this does not include the yield from higher wages. Instead it focuses on specific discretionary changes in tax policy, like rate reductions or a widening of bands.
- 4) "warehousing" the net impact of warehousing of taxes from 2020 - 2022, with repayments from 2022-2029.
- 5) "carryover" effects — policy impacts that are carried over from previous years.
- 6) "other" effects — other potential elements affecting the forecasts, including judgment applied by the Department of Finance. It is calculated as the difference between the Fiscal Council's internal forecasting exercise and the Department of Finance's own forecasts.

How the official tax forecasts are constructed

€ billion, year to year changes

Corporation tax

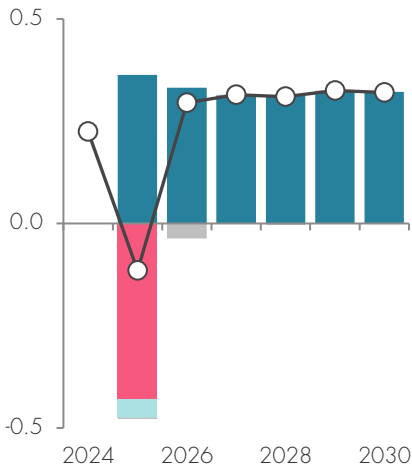

Value Added Tax

Pay-as-you-earn income tax

Universal social charge

Excise duties
