Advisory Council**

Fiscal Assessment Report
June 2025

Supporting items

This provides additional information related to the Council's analysis in its main report

Item 1 — Detail on our assessment of fiscal rules

Item 2 — Our “Stand-Still” estimates

Item 3 — How the official tax forecasts are made

Item 1 — Detail on our assessment of fiscal rules

The previous Government introduced the National Spending Rule in 2021. It aimed to set a limit on spending increases and tax cuts that would be considered sustainable. It was set at the economy's trend growth rate—believed to be 5%. However, the previous Government breached this 5% growth rate each year. The new Government appears to have abandoned the rule.

The net spending rule

€ billion unless stated otherwise

| | 2021 | 2022 | 2023 | 2024 | 2025 | 2026 |
|--|------|-------|-------|-------|-------|-------|
| How the spending rule is assessed | | | | | | |
| Total spending ⁽¹⁾ | 75.9 | 88.8 | 94.7 | 103.7 | 105.4 | 112.4 |
| plus assumed overrun ⁽²⁾ | | | | | 2.0 | 2.0 |
| less one-offs for cost-of-living supports ⁽³⁾ | | -3.1 | -2.1 | -2.5 | | |
| Total spending less one-offs | | 85.8 | 92.6 | 101.2 | 107.4 | 114.4 |
| plus/less net impact of revenue measures ⁽⁴⁾ | | 0.0 | -0.4 | -0.3 | 0.3 | -0.8 |
| Total net spending | | 85.7 | 92.1 | 100.9 | 107.7 | 113.6 |
| Single-year assessment ⁽⁵⁾ | | | | | | |
| Total net spending | | 13.0% | 7.4% | 9.0% | 6.4% | 5.7% |
| 5% path | 5% | 5% | 5% | 5% | 5% | 5% |
| Cumulative assessment since 2021 | | | | | | |
| Total net spending | 75.9 | 85.7 | 92.1 | 100.5 | 107.0 | 113.1 |
| 5% path | 75.9 | 79.7 | 83.7 | 87.9 | 92.3 | 96.9 |
| Cumulative gap | 0.0 | 6.0 | 8.4 | 12.6 | 14.7 | 16.3 |
| Cumulative gap in % | 0.0% | 7.6% | 10.1% | 14.4% | 16.0% | 16.8% |

Sources: The Government's Annual Progress Report 2025, and Fiscal Council workings.

⁽¹⁾ Total spending refers to total gross voted spending — a measure of central government spending that excludes interest and other non-voted spending. Note that for 2021, we use the original budgeted amount rather than the outturn, which was artificially lower as a result of the pandemic making some spending programmes impossible to proceed.

⁽²⁾ The overruns in 2025 and 2026 assumes spending in these years is €2 billion higher due to current spending overruns in 2024 carrying forward and being repeated, rather than falling out as Annual Progress Report 2025 assumes.

⁽³⁾ One-offs here are based on the Council's assessment of cost-of-living items that are temporary. Costs related to Ukrainian supports and supports for international protection applicants are included in total spending as they persist in the Government's projections.

⁽⁴⁾ Revenue-raising measures (such as tax increases) can be used to offset bigger spending increases, whereas revenue-reducing measures (such as tax cuts) would lower the scope for spending increases. Estimates of revenue-reducing and revenue-raising measures are those judged by the Fiscal Council.

⁽⁵⁾ This is if the National Spending Rule was followed in 2025, ignoring and not making up for past breaches.

Summary fiscal rules assessment

% of GDP

| | 2024 | 2025 | 2026 |
|--|------|------|------|
| Corrective Arm | | | |
| General government balance | 4.3 | 1.5 | 1.0 |
| General government balance Limit | -3.0 | -3.0 | -3.0 |
| | ✓ | ✓ | ✓ |
| General government debt | 40.9 | 37.7 | 35.9 |
| Debt-to-GDP ratio Limit | 60.0 | 60.0 | 60.0 |
| | ✓ | ✓ | ✓ |
| Preventive Arm & Domestic Budgetary Rule | | | |
| MTO for the structural balance | -0.5 | -0.5 | -0.5 |
| Structural balance | 1.2 | 0.7 | 0.4 |
| | ✓ | ✓ | ✓ |

Sources: CSO; Annual Progress Report; and Fiscal Council workings.

Notes: All figures are presented on a general government basis. Assessments are based on the latest Department of Finance projections of revenue, expenditure, potential output, and the output gap. We use the Council's [principles-based approach](#) for assessing the Domestic Budgetary Rule and we reflect the Council's own views on what constitute one-off or temporary items. The medium-term objective (MTO) is assumed constant at -0.5% of GDP for each year.

The new EU fiscal rules do not work well for Ireland. For one, they rely heavily on GDP. This fails to recognise that GDP is not a good measure of national income for the Irish economy.¹ Ireland's debt ratio, when measured on a GDP basis is low and projected to stay below 60% of GDP. A second issue is that the rules do not treat some of Ireland's corporation tax receipts as exceptional despite their high concentration and the risk that they could fall suddenly. If these high-risk receipts disappeared, Ireland would be running a deficit.

Here, we assess the rules on a GNI* basis and exclude excess corporation tax receipts.

Summary fiscal rules assessment (alternative assessment)

% of GNI*

| | 2024 | 2025 | 2026 |
|--|------|------|------|
| Corrective Arm | | | |
| General government balance * | -1.8 | -1.4 | -2.0 |
| General government balance Limit | -3.0 | -3.0 | -3.0 |
| General government debt | 70.0 | 65.3 | 62.5 |
| Debt-to-GDP ratio Limit | 60.0 | 60.0 | 60.0 |
| Preventive Arm & Domestic Budgetary Rule | | | |
| MTO for the structural balance | -0.5 | -0.5 | -0.5 |
| Structural balance ⁽¹⁾ | -2.0 | -3.0 | -3.4 |

Sources: Department of Finance; and Fiscal Council workings.

Notes: All figures are presented on a general government basis. Assessments are based on the latest Department of Finance projections of revenue, expenditure, windfall corporation tax receipts and the output gap, as well as the Council's projections for potential GNI*. We use the Council's [principles-based approach](#) for assessing the Domestic Budgetary Rule and we reflect the Council's own views on what constitute one-off or temporary items. The medium-term objective (MTO) is assumed constant at -0.5% of GNI* for each year.

⁽¹⁾ The structural balance estimates for 2025 and 2026 assume current spending in these years is €2 billion higher due to overruns in 2024 carrying forward and being repeated, rather than falling out as the Annual Progress Report 2025 assumes.

¹ It includes the profits of foreign multinationals which are not available for use by Irish residents. Huge worldwide exports by foreign multinationals are accounted for in Irish exports underpinning GDP. The gap between GNI* and GDP has grown to over €200 billion. This means that Ireland's debt ratio relative to national income is understated when scaled against GDP. For more on the EU rules, see the [Council's 2024 Briefing Note](#).

Net expenditure path (Fiscal Council assessment)

€ billion

| | 2023 | 2024 | 2025 | 2026 |
|---|-------|-------|-------|-------|
| Total Expenditure ⁽¹⁾ | 115.9 | 125.1 | 131.6 | 140.1 |

| Single-year assessment | | | | |
| Nationally financed net primary expenditure growth ⁽⁵⁾ | | 8.3% | 9.2% | 5.8% |

Sources: CSO; Department of Finance; and Fiscal Council workings.

¹ Total expenditure refers to general government expenditure.

² The overruns in 2025 and 2026 assumes spending in these years is €2 billion higher due to current spending overruns in 2024 carrying forward and being repeated, rather than falling out as Annual Progress Report 2025 assumes.

³ One-offs here are based on the Council's assessment of cost-of-living items that are temporary. Costs related to Ukrainian supports and supports for international protection applicants are included in total spending as they persist in the Government's projections.

⁴ Revenue-raising measures (such as tax increases) can be used to offset bigger spending increases, whereas revenue-reducing measures (such as tax cuts) would lower the scope for spending increases. Estimates of revenue-reducing and revenue-raising measures are those judged by the Fiscal Council.

⁵ The growth rates for "nationally financed net primary expenditure" are equal to $\frac{\text{Nationally financed net primary expenditure}_t}{\text{Adjusted expenditure}_{t-1}} - 1$

Net expenditure path (Department of Finance assessment)

€ billion

| Nationally financed net primary expenditure growth ⁽¹⁾ | | 8.0% | 5.3% | 5.8% |

Source: Annual Progress Report and bilateral communication with the Department of Finance

¹ The growth rates for "nationally financed net primary expenditure" are equal to $\frac{\text{Nationally financed net primary expenditure}_t}{\text{Adjusted expenditure}_{t-1}} - 1$

Item 2 — Our “Stand-Still” estimates

Stand-Still costs are estimates of how much public spending will have to rise by in future to maintain existing supports and services, while allowing for demographic changes and price pressures. They assume social welfare and public sector pay rise in line with general wages. Ultimately, this is a policy choice, and the approach assumes no efficiency gains in how public services are provided.

The Council’s “Stand-Still” estimates

€ billion, gross voted expenditure basis

| | 2026 | 2027 | 2028 | 2029 | 2030 |
|--|------|------|------|------|------|
| Government's current spending increases | 5.7 | | | | |
| Our estimates of “stand-still” costs | 4.7 | 4.6 | 4.8 | 4.7 | 5.0 |
| of which Demographics | 1.7 | 1.6 | 1.7 | 1.6 | 1.7 |
| of which Prices and wages | 3.0 | 2.9 | 3.1 | 3.1 | 3.3 |
| Broken down by key area | | | | | |
| Education including the National Training Fund | 0.4 | 0.3 | 0.4 | 0.4 | 0.4 |

Sources: APR 2025, and Fiscal Council workings.

Notes: For 2025, the public sector pay deal is incorporated. For 2026, economy-wide wage growth is used as the pay deal only applies for half the year.

Item 3 —How the official tax forecasts are made

This section shows how the Government's official tax forecasts are made.

We break down the yearly tax projections so as to better understand how the forecasts are arrived at.

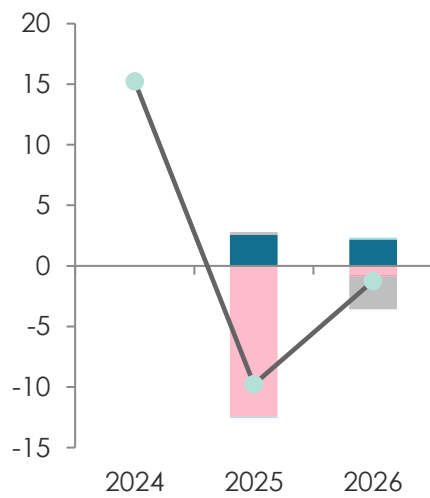

The annual changes in taxes broken down into:

- 1) "macro" drivers — the part of the forecast driven by growth in the relevant macro driver. A macro driver can be something like wage growth in the case of income tax, given that income tax is sensitive to how this evolves.
- 2) "one-offs" — non-recurring items that affect receipts.
- 3) "policy" changes, such as government decisions to cut or increase taxes. For income tax items, like PAYE and USC, this does not include the yield from higher wages. Instead it focuses on specific discretionary changes in tax policy, like rate reductions or a widening of bands.
- 4) "warehousing" the net impact of warehousing of taxes from 2020 - 2022, with repayments thereafter.
- 5) "carryover" effects — policy impacts that are carried over from previous years.
- 6) "other" effects — other potential elements affecting the forecasts, including judgment applied by the Department of Finance. It is calculated as the difference between the Fiscal Council's internal forecasting exercise and the Department of Finance's own forecasts.
